

Green Code of Tenants

Logan Group Company Limited strictly implements the environmental protection requirements for tenants in various commercial projects, actively promotes the Group's environmental protection concept, provides relevant consulting work for merchants, and puts forward the following requirements for tenants:

1. The electrical materials used for shop decoration must meet environmental protection requirements, and use energy-saving and environmentally friendly lighting equipment (such as LED lighting fixtures), and high-heat and high-power lighting equipment is prohibited;
2. All decoration materials of merchants must meet the national environmental protection requirements, and materials with excessive formaldehyde content are prohibited;

3. Catering companies must design and install drainage and oil separation devices, which should be isolated before being discharged into the municipal sewage pipe network;
4. Fume emissions from catering merchants must meet environmental protection requirements, catering merchants must clean up regularly, and exhaust gas emissions must meet national standards;
5. Catering merchants must implement a garbage classification system. Waste catering garbage is collected by professional units, and waste grease is handled by professional recycling companies. Large garbage, recyclable garbage, construction garbage, etc. need to be separated for treatment. Hazardous garbage is stored separately and regularly recycled by professionals;
6. Logan Group adheres to the concept of environmental protection, regularly conducts environmental protection publicity, environmental protection training, and enhances the awareness of commercial waste classification through knowledge quizzes and other methods;
7. Logan Group has set up a Green Environmental Protection Honor List,

which it evaluates quarterly and gives out rewards to merchants on the list.

8. We will review this policy every year.
